**PRIOR ART**

---

[Description of the Prior Art]Conventionally, the source device of spot light is provided with the collection mirror which condenses the light emitted by the lamp, and it is constituted so that it may enter into the end of the fiber bundle in which the light condensed by this collection mirror was inserted by the fiber entry. This source device of spot light is provided with the shutter plate which interrupts that the light condensed by the collection mirror enters into the end of a fiber bundle, and is making the light which enters into the end of a fiber bundle turn on and off with this shutter plate. The device indicated to JP,5-22212,B also exists in the conventional source device of spot light.
